

Revolution NMR LLC Announces Announces **License Agreement with Florida State** **University for Non-Spinning Probes**

Revolution NMR is pleased to announce a license agreement with the Florida State University Research Foundation (FSURF). Under the terms of this agreement, Revolution NMR will have the sole commercial right to manufacture and market non-spinning solid state NMR probe technology worldwide.

The licensed technology was developed at the National High Magnetic Field Laboratory (NHMFL) by Peter Gor'kov and his team. Gor'kov probes are well known for technical innovation, high performance, and exceptional craftsmanship.

The NHMFL user community has employed Gor'kov probes to characterize a variety of complex biomolecules and other challenging samples. Revolution NMR can now offer users the option of obtaining these probes for use in their own laboratories.
